SIPLUS extreme: Durable and robust
Automation and drive technology for extreme ambient conditions

Engineered with TIA Portal

siemens.com/siplus-extreme
Extremely dependable: SIPLUS extreme

From SIMATIC, LOGO! and SITOP to SIRIUS, SINAMICS and SIMOTION, Siemens offers automation and drive systems that meet every requirement of the manufacturing and process industries: optimally coordinated, standard components that have been proven to be successful millions of times over and work together efficiently thanks to common standards. They form the technological basis of our family of coated SIPLUS extreme products – reliable even under harshest conditions.

Why SIPLUS extreme?

SIPLUS extreme products are standard components that are more resistant to mechanical loads, chemical and biological substances, condensation and temperature fluctuations. The SIPLUS extreme technology protects your products against resulting corrosion, dendrite and whisker formation and other harmful deposits, thereby preventing faults and down-times. The expansion of the temperature range to –40 °C and +70 °C allows SIPLUS extreme products to be used even where the standard is no longer sufficient.

SIPLUS extreme covers a wide range of products:

• Controllers
• Distributed IO
• HMI devices
• Components for industrial communication
• Components for industrial switching systems
• Drive systems
• Power supplies

The coating process

Simple protective coatings are not enough. Instead, cleaning processes, material selection and coating technologies have to be coordinated so that they work together optimally. SIPLUS extreme conformal coating ensures the permanent cover of all components and solder joints, which is not the case with a simple coating. Thanks to our special, high-quality coating and optimized processes, our products achieve maximum values in environmental tests.

System benefits at a glance

SIPLUS extreme upgrades the advanced automation and drive components from Siemens.

• **Dependability**
  No maintenance, thanks to extensive testing of SIPLUS extreme.

• **Energy efficiency**
  No additional heating/cooling is necessary, reducing energy costs and increasing climate protection.

• **Standard engineering**
  Consistent data storage, thanks to seamless integration into the TIA Portal Engineering Framework.

• **Certification**
  Extensively tested for toxic gases, sand and dust, biological substances in a test lab accredited in Germany, or certified by the TÜV technical inspection association for fail-safe applications.

SIPLUS extreme – beyond resistance to harsh environments

- Extensive testing
- No cooling or heating
- Long-term planning security
- Saves time
- Maintenance-free
- Flexibility
- Low energy costs
- Investment security
Extensive testing

To ensure that the SIPLUS extreme products are fully operational even under the harshest ambient conditions, they undergo numerous tests under high-load and corrosive conditions. They are added to the product family only after passing these tests.

NEW: SIPLUS extreme – dependable protection against dendrite and corrosion. Relative humidity and temperature changes as well as toxic gases can cause condensation, leading to short circuits. Learn all about the resistance of our SIPLUS extreme products online: siemens.com/siplus-extreme

Videos about the SIPLUS extreme test methods are available on our website

### Control Cabinet for indoor and outdoor use

Applications with SIPLUS extreme operate smoothly under all conditions – without any cooling or heating systems. The field installation for cabinets with SIPLUS extreme products are EN 60721-3-3 conform.
Fit for use under extreme conditions

Production automation
In production automation, SIPLUS extreme components are used for special machinery and other purposes, ranging from meat processing to toxic atmospheres in tire production to cooling logistics.

- Textile machines
- Tires
- Wood processing
- Processing industry
- Logistics
- Food and beverage
- Packaging systems

Many industries require technologies that resist heat and cold, gases and moisture in routine industrial situations and operate reliably and dependable. They all benefit from SIPLUS extreme products, which can be handled just like any standard Siemens product but withstand a lot more stress.

Hybrid industries
In the hybrid industries, there are many applications in which SIPLUS extreme’s weather resistance pays off, such as railway signaling systems and sports and recreation facilities.

- Special vehicles
- Trains
- Cranes
- Tunnels
- Wind power

Process automation
Process automation makes versatile use of SIPLUS extreme technologies in a wide range of fields. Stand-alone maritime solutions, cooling systems for converters and gas distribution systems all use the many benefits of the coating.

- Minerals
- Water and wastewater
- Oil and gas
- Marine

- Cement
- Seawater desalination
- Mining
- Pulp & paper
